**Movement  
is magic**

Whatever your activity level, moving just a little bit more has some truly amazing benefits. You'll build muscle, strengthen bones, improve balance, lift your spirits, engage more with the world around you...and have fun! Camino is on a mission to help you discover the magic of movement, one step at a time.

## Our Story

Our founder, Duncan Orrell-Jones, developed Camino as he watched his parents struggle with traditional mobility devices. He aimed to take the outdated, clunky walker and update it using the latest materials, motors, AI gait analysis, and robotic controllers. The result of years of work and research is Camino, the world's first Smart Walker.

## Your Story

You want to keep moving! You have an eye for great design and want a mobility device that looks cool and is simple to use. You'd love a boost uphill, gentle braking downhill, easier maneuverability on uneven surfaces, and diagnostics to share with your doctor. You're ready to take the next step in your mobility with Camino.

**Stylish outside,  
smart inside,  
simple to use.**

### Stylish outside

Mobility just got cool. With a sleek carbon fiber and anodized aluminum design, you'll turn heads for the right reasons.

### Smart inside

Power wheels and automatic braking give you a gentle power boost uphill, support downhill, and better maneuverability on uneven surfaces. AI gait diagnostics help you and your caregivers better manage your mobility, so you can walk well and age well.

App is not required to use Camino.

### Simple to use

Narrow Mode gets you through tight spaces, and Compact Mode allows you store Camino in car trunks and airplane overhead compartments. Automatic braking lets Camino magic do the work, no buttons or brake levers required. Automatic lights help you keep moving safely in low light.

\*Manual override brakes are included should you prefer to use them!

**Camino helps keep you moving  
—so you can keep doing what you love.**

Power wheels and automatic braking give you a gentle boost uphill, more support downhill, and better maneuverability on uneven surfaces.

AI gait analysis helps you and your caregivers better manage your mobility, so you can walk well and age well.

Designed and assembled in California.
